THE failure of the Bank of California was brought about like all the heavy banking failures of recent years, reckless itself to a legitimate banking business, the concern rushed wildly into the whirlpool of speculation and was swallowed up. Under the circumstances the collapse was inevitable, and was only a question of time. There is a moral to be deduced from this great financial wreck which it is hoped institutions of a similar nature will profit by. So long as bankers persist in violating banking laws they may expect to reap the penalty. Will they heed this last warning?
